Mahmoud Sherif Mahmoud

Junior Software Engineer

Cairo, Egypt | +2 01013765365| mahmoudsherif8002@gmail.com | https://www.linkedin.com/in/mahmoud-sherif0/

Career Objective

Dedicated third-year Computer Science student and Honor List achiever, driven by a deep passion for technology since childhood. Strong foundation in computer science fundamentals, problem solving, and hardware concepts, supported by completing multiple technical courses. Proven ability to manage academic responsibilities alongside working as a coding instructor while maintaining high performance.

Aspiring to join a challenging and growth-oriented company to develop advanced skills and build a successful long-term career, with the vision of establishing my own business in the future.

Education

Bachelor of Computer Science and Artificial Intelligence Expected 2027

Ahram Canadian University

- **Major**: Artificial intelligence
- **GPA:** 3.67/4 (Excellent)

Professional Experience

Computer Science Instructor **July2024-Present**

Creative Children Community Cairo-Egypt

- Awarded for excellence in teaching coding to children, covering HTML, CSS, and Python programming language as Instructor of the Month Certificate. **(Link)**
- Delivered **300+ engaging lectures** and discussion-based sessions, promoting active learning and critical thinking.
- Demonstrating programming concepts and problem-solving skills techniques.
- Providing guidance and feedback to students on their assignments and projects
- Conducting hands-on labs or coding exercises.

Backend Developer Intern **June 2025-Agust 2025**

Microsystem Cloud Business Solutions intern Cairo-Egypt

- Developed and maintained backend applications using C#, applying OOP and SOLID principles, and implementing design patterns like Repository, Factory, and Singleton, **resulting in 30% faster code maintainability** and reduced system errors. Applied SOLID principles to build clean, scalable, and maintainable codebases.
- Designed and managed relational databases, writing efficient SQL queries that **improved data retrieval speed by 25%** and **ensured 99% data accuracy** across applications.

Trainee as Computer Science Instructor **May 2024 – July 2024**

Creative Children Community. Cairo-Egypt

- Developed engaging programming lessons and hands-on coding labs that motivated students and sparked their interest.
- Effectively explained technical concepts to students and parents, receiving consistently excellent reviews and high assignment marks.
- Earned recognition for performance, leading to a contract extension and an expanded role within the company.

Extracurricular activities:

Participated in ECPC (Egyptian Collegiate Programming Contest) August 2024

- Competitive programming participant with strong skills in algorithms, memory management, and problem solving, developed through solving complex challenges and continuous practice.

Courses

Data Science (national technical program) **Nov 2025 – June 2026**

Digital Egypt pioneers initiative By Ministry of Communications and Information Technology

- Intensive training in Data Science foundations, including data analysis, visualization, SQL databases, and Python-based workflows for extracting insights and building data-driven solutions.
- Hands-on experience in Machine Learning and applied AI, covering model development, evaluation, and deployment-oriented practices using industry tools such as ML flow and Hugging Face.
- Completion of end-to-end projects and a capstone, applying the full data science lifecycle—from problem formulation and data preparation to model building and real-world business insight generation.

Problem Solving Course – Level 2 **(Official Certificate)**

Coach Academy May 2025

- Complexity analysis and recursion, Standard Template Libraries (STLs), Static range queries, two pointers & sliding window techniques, Binary search, Recursive and iterative complete search (backtrack & bitmasks), Greedy algorithms, Number theory (Level I & II).

Projects

Ticket Booking System (Academic Project)

- Developed a **desktop application** using **C# (Windows Forms)** and **SQL Server** for managing ticket reservations.
- Implemented **Object-Oriented Programming (OOP)** principles to ensure modular and maintainable code.
- Users can register, log in, update profiles, and book tickets with automatic updates to the SQL database.
- Admins can add/delete movies and sports matches and manage user accounts.
- Role-based access control implemented via a user role attribute in the database.

Parking Management System (Academic Project)

- Developed a **parking management system** in **C++** using **Object-Oriented Programming (OOP) principles.**
- Utilized advanced **data structures**: linked lists, queues, and binary search trees (BSTs) for efficient data management.
- **Features implemented:**

  Car entries and slot assignments
  License plate searches
  Parking status tracking
  Waiting and exit management
  Cost calculation based on parking duration
- Demonstrated skills in **modular coding**, problem-solving, and applying **advanced data structures** in real-world scenarios.

Skills

Technical skills:

- **Basic Understanding** of (C++/ C# / python) concepts And Object-Oriented Programming (OOP) concepts.
- **Intermediate level** of Data Structures and Algorithms.
- **Entry-level knowledge** of (Database) concepts And Operating Systems concepts.

Soft skills:

- Leadership Skills | Teamwork skills | Self-Learning | Problem solving

Languages:

- Arabic: Mother Tongue
- English Very Good (Writing, Speaking)
